

SCHOOL *of* DATA SCIENCE

# Overview of Federated Learning

Distributed Computing  
School of Data Science  
University of Virginia

# Agenda

- > Federated Learning (FL) Background
- > Federated Averaging (FedAvg)
- > FL in Production
- > Non-IID Data
- > Differential Privacy
- > Other Considerations and Challenges

# FL Background

# Decentralized vs Distributed Data

## Decentralized

- Data is spread across machines
- No single entity controls all data
- No single entity sees all data**
- Nodes can have their own policies and permissions

## Distributed

- Data is spread across machines
- System has central authority**
